TinyLogic UHS Dual Unbuffered Inverter

Description

The NC7WZU04 is a dual unbuffered inverter from ON Semiconductor's Ultra High Speed Series of TinyLogic in the space saving SC–88 6–lead package. The special purpose unbuffered circuit design is intended for crystal oscillator or analog applications. The internal circuit consists of only one–stage, the output, to allow for this part to be used in these oscillator or analog applications. The device is fabricated with advanced CMOS technology to achieve ultra high speed with high output drive while maintaining low static power dissipation over a very broad $V_{\rm CC}$ operating range. The device is specified to operate over the 1.65 V to 5.5 V $V_{\rm CC}$ range. The inputs are high impedance when $V_{\rm CC}$ is 0 V. Inputs tolerate voltages up to 5.5 V independent of $V_{\rm CC}$ operating voltage.

C_{PD} is defined as the value of the internal equivalent capacitance which is derived from dynamic operating current consumption (I_{CCD}) at no output loading and operating at 50% duty cycle. C_{PD} is related to I_{CCD} dynamic operating current by the expression:
 I_{CCD} = (C_{PD}) (V_{CC}) (f_{IN}) + (I_{CC}static).

AC Loading and Waveforms

 $^{\star}C_{L}$ includes load and stray capacitance. Input PRR = 1.0 MHz, t_{W} = 500 ns.

Figure 5. AC Test Circuit

Application Note: When operating the NC7WZU04's unbuffered output stage in its linear range, as in oscillator applications, care must be taken to observe maximum power rating for the device and package. The high drive nature of the design of the output stage will result in substantial simultaneous conduction currents when the stage is in the linear region. See the I_{CCPEAK} specification on page 4.

Input = AC Waveform; $t_r = t_f = 1.8$ ns. PRR = 10 MHz; Duty Cycle = 50%.
