

74F161A, 74F163A 4-bit binary counter

Product specification
Supersedes data of 1996 Jan 29 IC15 Data Handbook

## 4-bit binary counters

## FEATURES

- Synchronous counting and loading
- Two count enable inputs for n-bit cascading
- Positive edge-triggered clock
- Asynchronous Master Reset (74F161A)
- Synchronous Reset (74F163A)
- High speed synchronous expansion
- Typical count rate of 130 MHz
- Industrial range $\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+85^{\circ} \mathrm{C}\right)$ available

## DESCRIPTION

4-bit binary counters feature an internal carry look-ahead and can be used for high-speed counting. Synchronous operation is provided by having all flip-flops clocked simultaneously on the positive-going edge of the clock. The clock input is buffered.
The outputs of the counters may be preset to High or Low level. A Low level at the Parallel Enable (PE) input disables the counting action and causes the data at the D0-D3 inputs to be loaded into the counter on the positive-going edge of the clock (provided that the setup and hold requirements for PE are met). Preset takes place regardless of the levels at Count Enable (CEP, CET) inputs.

A Low level at the Master Reset (MR) input sets all the four outputs of the flip-flops (Q0 - Q3) in 74F161A to Low levels, regardless of the levels at CP, PE, CET and CEP inputs (thus providing an asynchronous clear function). For the 74F163A, the clear function is synchronous. A Low level at the Synchronous Reset (SR) input sets all four outputs of the flip-flops ( $\mathrm{Q} 0-\mathrm{Q} 3$ ) to Low levels after the next positive-going transition on the clock (CP) input (provided that the setup and hold time requirements for $\overline{\mathrm{SR}}$ are met). This action occurs regardless of the levels at PE, CET, and CEP inputs. The synchronous reset feature enables the designer to modify the maximum count with only one external NAND gate (see Figure 1). The carry look-ahead simplifies serial cascading of the counters. Both Count Enable (CEP and CET) inputs must be High to count. The CET input is fed forward to enable the TC output. The TC output thus enabled will produce a High output pulse of a duration approximately equal to the High level output of Q0. This pulse can be used to enable the next cascaded stage (see Figure 2). The TC output is subjected to decoding spikes due to internal race conditions. Therefore, it is not recommended for use as clock or asynchronous reset for flip-flops, registers, or counters.

| TYPE | TYPICAL <br> $\mathbf{f}_{\text {MAX }}$ | TYPICAL SUPPLY CURRENT <br> (TOTAL) |
| :---: | :---: | :---: |

## INPUT AND OUTPUT LOADING AND FAN-OUT TABLE

| PINS | DESCRIPTION | 74F (U.L.) HIGH/LOW | LOAD VALUE HIGH/LOW |
| :---: | :--- | :---: | :---: |
| D0 - D3 | Data inputs | $1.0 / 1.0$ | $20 \mu \mathrm{~A} / 0.6 \mathrm{~mA}$ |
| CEP | Count Enable Parallel input | $1.0 / 1.0$ | $20 \mu \mathrm{~A} / 0.6 \mathrm{~mA}$ |
| CET | Count Enable Trickle input | $1.0 / 2.0$ | $20 \mu \mathrm{~A} / 1.2 \mathrm{~mA}$ |
| CP | Clock input (active rising edge) | $1.0 / 1.0$ | $20 \mu \mathrm{~A} / 0.6 \mathrm{~mA}$ |
| PE | Parallel Enable input (active Low) | $1.0 / 2.0$ | $20 \mu \mathrm{~A} / 1.2 \mathrm{~mA}$ |
| MR | Asynchronous Master Reset input <br> (active Low) for 74F161A | $1.0 / 1.0$ | $20 \mu \mathrm{~A} / 0.6 \mathrm{~mA}$ |
| SR | Synchronous Reset input <br> (active Low) for 74F163A | $1.0 / 1.0$ | $20 \mu \mathrm{~A} / 0.6 \mathrm{~mA}$ |
| TC | Terminal count output | $50 / 33$ | $1.0 \mathrm{~mA} / 20 \mathrm{~mA}$ |
| Q0 - Q3 | Flip-flop outputs | $50 / 33$ | $1.0 \mathrm{~mA} / 20 \mathrm{~mA}$ |

## NOTE:

One (1.0) FAST unit load is defined as: $20 \mu \mathrm{~A}$ in the High state and 0.6 mA in the Low state.

|  |  | $\mathrm{I}_{\text {CCL }}$ |  |  |  |  | 49 | 65 | mA |

## NOTES:

1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
2. All typical values are at $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V}, \mathrm{~T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$.
3. Not more than one output should be shorted at a time. For testing los, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, los tests should be performed last.

## AC WAVEFORMS

For all waveforms, $\mathrm{V}_{\mathrm{M}}=1.5 \mathrm{~V}$.
The shaded areas indicate when the input is permitted to change for predictable output performance.

Waveform 1. Propagation Delay, Clock Input to Output, Clock Pulse Width, and Maximum Clock Frequency

Waveform 3. Master Reset Pulse Width, Master Reset to Output Delay, and Master Reset to Recovery Time

Waveform 5. Synchronous Reset Setup and Hold Times

Waveform 2. Propagation Delay, CET Input to TC Output

Waveform 4. CEP and CET Reset Setup and Hold Times

Waveform 6. Parallel Data and Parallel Enable Setup and Hold Times

## TEST CIRCUIT AND WAVEFORMS

Test Circuit for Totem-Pole Outputs

DEFINITIONS:
$R_{L}=$ Load resistor; see AC ELECTRICAL CHARACTERISTICS for value.
$C_{L}=$ Load capacitance includes jig and probe capacitance; see AC ELECTRICAL CHARACTERISTICS for value.
$R_{T}=$ Termination resistance should be equal to $Z_{\text {OUT }}$ of pulse generators.

Data sheet status

| Data sheet <br> status | Product <br> status | Definition [1] |
| :--- | :--- | :--- |
| Objective <br> specification | Development | This data sheet contains the design target or goal specifications for product development. <br> Specification may change in any manner without notice. |
| Preliminary <br> specification | Qualification | This data sheet contains preliminary data, and supplementary data will be published at a later date. <br> Philips Semiconductors reserves the right to make changes at any time without notice in order to <br> improve design and supply the best possible product. |
| Product <br> specification | Production | This data sheet contains final specifications. Philips Semiconductors reserves the right to make <br> changes at any time without notice in order to improve design and supply the best possible product. |

[1] Please consult the most recently issued datasheet before initiating or completing a design.

## Definitions

Short-form specification - The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.
Limiting values definition - Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.
Application information - Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## Disclaimers

Life support - These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes - Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
